

Boulia Solar Farm and Battery Project Update

February 2025

It's all happening at Boulia - Solar Farm progressing!

February already, check out where things are at...

Since our January update this is what the Yurika team have been doing at the Boulia Solar Farm and Battery Facility.

The team has completed installation of posts, racking and solar panels.

- 560 posts have been installed with sixty remaining, anticipating completion by end of February.
- 1,722 metres of racking and 3,024 solar panels to be installed with 1,230 of racking completed and 1,008 solar panels completed.

Figures 1-4 show what has been installed.

Fig 1- Installing the posts

Fig 2- Quality assurance: Pile extraction to ensure alignment of posts

Fig 3- Posts installed, solar panel mounted.

Local benefits for the community will see a local fencing contractor commence works once tender process has been completed.

Project Timeline on track

Once the solar panels and inverter stations have been completed our experienced battery partners, Penske Australia who successfully tendered and was awarded the contract to provide the battery units for the facility will commence work on the battery design and build stage. We have been working with Penske for some time, as they install batteries right across our network at locations like down the road at Bedourie.

Weather permitting and other possible matters that may be out of our control it appears our project schedule looks to be on track, and we should see system integration and commissioning completed by late 2025- see Figure 5 below.
